DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/31/2005 has been entered.

Allowable Subject Matter

2. Claims 1-3,5-14 are allowable over the prior art of record.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 15,16,28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hiroi (6549241) in view of Chawla (6360368).

As per claim 15, Hiroi (6549241) teaches an uplink transmitting AC-3 audio with video transmissions in a satellite broadcast system (col. 4 lines 35-50; col. 5 lines 60-65) comprising:

“an encoder.....digital transport packets” as data process handling the input signal (fig. 1), and mixing the signal to audio and video signals (fig. 1, subblock 150 -- stream combiner)

“a multiplexer.....guide data” as multiplexing the information, including guide information (fig. 1, subblock 145; fig 5a – category lists; and figure 6)

Hiroi (6549241) does not explicitly teach sensing a plurality of audio signal formats and redirecting the signals to a plurality of encoders (Hiroi (6549241) teaches separation of multistream data), however, Chawla (6360369) teaches a content manager that discerns different audio formats via a packet identifier (PID), (Chawla (6360369), col. 9 lines 4-14, col. 8 lines 40-42). Therefore, it would have been obvious to one of ordinary skill in the art of multistream data handlers to modify the teachings of Hiroi (6549241) with a content manager with the ability to discern differing audio formats because it would advantageously allow for the handling of several audio streams in different languages (Chawla (6360369), col. 8 lines 52-55).

Art Unit: 2654

As per claims 16,28, the combination of Hiroi (6549241) in view of Chawla (6360369) teaches detection of format type (as detecting the PID's, and determining which decoder/channel belongs to that particular packet (fig. 11 and fig. 12).
